2.5+ yrs Laravel / Full-Stack • **10K+** Orders/Month at Scale • **5** Live Production Products • **6** Languages Spoken

Professional Summary

Full-stack engineer with 2.5+ years building and shipping production **Laravel/PHP** applications across SaaS, e-commerce, and fintech. Core strength in **Laravel, MySQL, and REST APIs** — including a Shopify order backend sustaining **10,000+ orders/month** and five live client products — with **Vue.js** and React/Next.js on the frontend. Comfortable across the full stack: **Vue SPA** → **REST API** → **Laravel** → **MySQL**, backed by Eloquent, queues, events, Sanctum auth, Docker, and CI/CD. Also ships Node.js/TypeScript and Python/FastAPI services. Fluent in English with native Gujarati and Hindi; based in Ahmedabad, available immediately.

Technical Skills

Languages: PHP, JavaScript, TypeScript, Python, SQL
Backend: Laravel, Eloquent ORM, REST APIs, MVC, Queues/Jobs/Events, WebSockets, Sanctum, JWT/OAuth 2.0, Caching, Rate Limiting; also FastAPI, Node.js, Express, NestJS
Frontend: Vue.js, JavaScript, Axios, Tailwind CSS, HTML5, CSS3; also React, Next.js
Databases: MySQL, PostgreSQL, Redis, MongoDB, Query Optimization, Indexing
Cloud & DevOps: Docker, AWS (EC2, S3), GitHub Actions, CI/CD, Git, Nginx, Linux
Integrations: Stripe, PayPal, Twilio OTP/2FA, Shopify API, Google OAuth 2.0, Zerodha Kite API, KYC & Wallet Flows
AI / LLM: RAG, LangChain/LangGraph, pgvector/ChromaDB, OpenAI, Google Gemini
Testing: PHPUnit/Pest, Jest, pytest, Unit & Integration Testing
Concepts: OOP, SOLID, Design Patterns, System Design, REST, Microservices, Agile/Scrum

Professional Experience

Sapphire Software Solution **Jul 2023 – Aug 2025**
Software Engineer (Laravel / Full-Stack) *Ahmedabad, India*

- Delivered five client platforms end-to-end across SaaS, e-commerce, fintech, and social products (**Laravel, Vue.js, MySQL**); all five remain live in production.
- Optimized MySQL performance through indexing and query restructuring and moved order fulfilment into queued background workers for a Shopify order backend sustaining **10,000+ orders/month**.
- Engineered event-driven Laravel backends (queues, events, secure webhooks) powering WebSocket-based live bid broadcasting, a transactional wallet ledger, and automated revenue-split payouts — removing manual payout calculation.
- Designed and documented REST APIs for Stripe/PayPal payments, Twilio OTP/2FA, and KYC onboarding, with multilingual support and CMS-driven approval workflows, enabling secure multi-provider payments and compliant onboarding.
- Owned end-to-end client-facing delivery — requirements, architecture, implementation, code review, and post-launch support — earning **Employee of the Quarter (2025)** and the **Emerging Star Award (2024)**.

Freelance Software Engineer **Sep 2025 – Present**
Backend & Full-Stack Engineer *Remote*

- Built the **Laravel + MySQL** backend and REST APIs for **Spot It Now**, a cross-platform wildlife-sighting product — geospatial sighting feeds, photo uploads, secure auth (sign-up / login / OTP), and push notifications consumed by the Android and iOS clients — plus an admin panel for moderation and AdMob.
- Shipped independent full-stack and AI engagements using Laravel, Vue.js, Node.js, FastAPI, and OpenAI/Gemini — see Projects for technical detail on each.

Client Platforms Delivered (Sapphire)

- **Terri Tie** — friendwe.com — Built a **Laravel/MySQL backend with a Vue.js frontend** for a dating and subscription product, delivering matchmaking, real-time messaging, and tiered premium subscriptions.
- **Auction Platform** — live — Built a real-time Laravel/MySQL bidding engine with live bid broadcasting and admin controls, securing bidder identity via Twilio OTP/2FA and Google Places verification.
- **Fastest Finger First** — fastestfingerfirst.in — Built a Laravel/MySQL quiz and rewards platform with a real-time scoring engine and live leaderboards, replacing manual reward tracking with automated wallet-based distribution.

- **Stock Saathi** — financesaathi.com — Built a Laravel/MySQL fintech analytics dashboard integrating the Zerodha Kite API for real-time market data, portfolio tracking, and trend insights.
- **MaDigital** — Built a Laravel/MySQL music-collaboration SaaS platform with KYC onboarding, subscription billing, and automated revenue-split payouts, using a multilingual CMS-driven workflow to reduce manual reviewer effort.

Projects

FlowBoard — Real-Time Team Task Board (Laravel + Vue.js) GitHub

Laravel 11, PHP 8.2, Vue 3, MySQL, Sanctum, Pinia, Reverb, Pest

- Built a full-stack Kanban board with a **Vue 3 SPA** (Composition API, Pinia, Vue Router) consuming a **Laravel 11 REST API** over **Axios with Sanctum token auth**, backed by **MySQL** with Eloquent relationships and pivot-based board membership/RBAC — demonstrating the complete Vue → API → Laravel → database flow.
- Implemented drag-and-drop card moves, board-scoped **Policies**, **Form Request** validation, and **API Resources**, with assignment notifications dispatched to **queued jobs** and live board updates broadcast via Laravel Reverb/Echo — validated with **Pest** feature tests.

FeedbackIQ — Multi-Tenant Laravel SaaS API with LLM Analysis GitHub

Laravel 11, PHP 8.2, MySQL, Redis, Sanctum, Docker

- Built a multi-tenant Laravel 11 SaaS REST API (Sanctum auth, Eloquent, Policies/RBAC, API Resources) that ingests user feedback and classifies sentiment, themes, and urgency via an LLM dispatched to queued Redis workers, keeping the ingest endpoint fast.
- Added OpenAPI documentation, Pest feature and unit tests, and a Dockerized GitHub Actions CI pipeline, with a deployed live demo.

ShopSense — Node.js/NestJS E-Commerce API with AI Product Search GitHub

Node.js, NestJS, TypeScript, PostgreSQL + pgvector, Prisma, Redis, BullMQ, Stripe

- Built an e-commerce backend API in NestJS + TypeScript (JWT auth, Prisma/PostgreSQL, Redis, BullMQ) with Stripe checkout, webhook-driven order reconciliation, and Socket.io real-time order updates.
- Added natural-language product search and an LLM shopping assistant using pgvector semantic search and function calling, documented with OpenAPI and tested with Jest.

NexCart — Full-Stack Next.js Commerce Platform GitHub

Next.js 16, React 19, TypeScript, Stripe, PayPal, Google OAuth

- Built a customer-facing storefront and admin dashboard in Next.js/React with Stripe and PayPal server-side payment capture, webhook-driven order reconciliation, and Google OAuth 2.0 sign-in.
- Added server-side revenue, conversion, and inventory aggregation, plus an LLM product-discovery assistant over the catalog.

production-rag-eval — RAG Chatbot with Evaluation Harness GitHub

Python, FastAPI, LangChain, ChromaDB, RAGAS / DeepEval, Gemini + Ollama, Docker

- Built a RAG chatbot (FastAPI + Streamlit) with `bge-base` embeddings, ChromaDB vector search, and MMR retrieval, served by Google Gemini and local Ollama models for cost-controlled inference.
- Automated quality evaluation with RAGAS and DeepEval (faithfulness, answer relevancy, context precision) in a GitHub Actions pipeline, reaching 92% test coverage and sub-1.2s average response latency.

Education

- **B.Tech in Computer Science & Engineering** — Indus University, Ahmedabad | 2019–2023 | CGPA 8.89/10

Credentials

- **IBM Project Manager** — Professional Certificate, Coursera (2026): project lifecycle, risk and stakeholder management, Agile/Scrum; CAPM exam preparation. Credential
- **Generative AI Mastermind** — Outskill (2026): applied LLMs, prompt engineering, and AI application building.

Languages

- **Gujarati** — Native | **Hindi** — Native | **English** — Fluent (Professional Working Proficiency)
